

GS2803

Low Current Consumption and Low Dropout Voltage LDO

Product Description

The GS2803 series, developed by using the CMOS technology, is a positive voltage regulator IC which has the super low current consumption and the low dropout voltage. Current consumption is as low as 1 μ A typ., and a ceramic capacitor of 0.1 μ F or more can be used as the input and output capacitors. It also has high-accuracy output voltage of $\pm 1.0\%$ typical / $\pm 1.5\%$ Maximum.

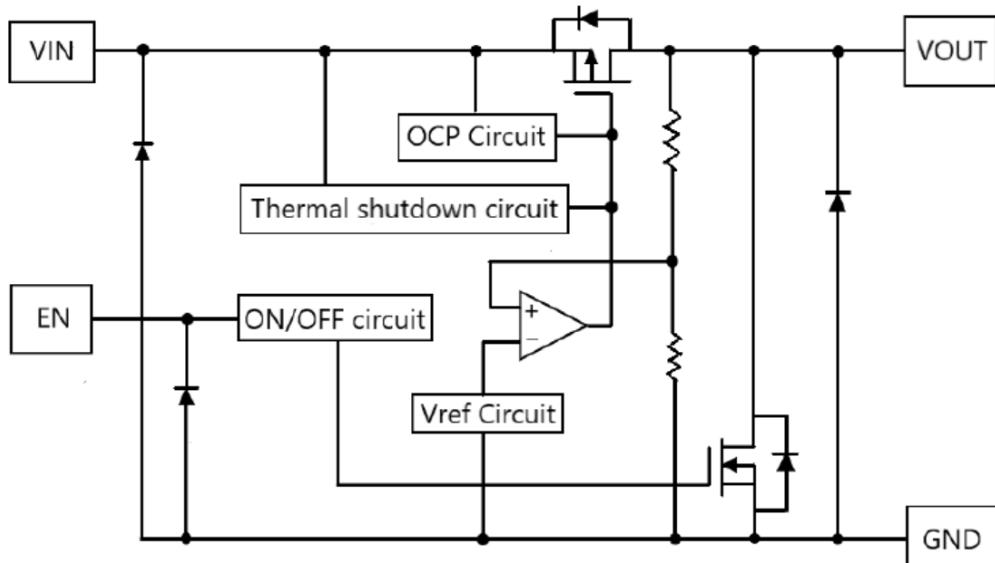

Features

- Output voltage 1.0 V to 3.5 V, selectable in 0.05 V step.
- Input voltage: 1.5 V to 5.5 V
- Dropout Voltage 170 mV typ. (2.8 V output product, I_{OUT} = 100 mA)
- Current consumption:
 - During operation: 1 μ A typ., 1.35 μ A max.
 - During power-off: 0.01 μ A typ., 0.1 μ A max.
- Output current: Possible to output 200 mA ($V_{OUT} \geq 1.4$ V, $V_{IN} \geq V_{OUT} + 1.0$ V)
- Built-in overcurrent protection circuit: Limits overcurrent of output transistor
- Built-in thermal shutdown circuit: Prevents damage caused by heat
- Built-in ON / OFF circuit: Ensures long battery life
- Lead-free(Sn 100%), halogen-free

Applications

- Portable communication device, digital camera, and digital audio player
- Battery-powered device
- Home electric / electronic appliance

Packages & Pin Assignments

SOT-23	SOT-23-5L	DFN1X1-4L	
Pin Name	Function		
NC	No Connect.		
EN	Enable Input. Pulling this pin below 0.3V turn the regulator off, reducing the quiescent current to a fraction of its operating value. The device will be enabled if this pin is left open. Connect to V _{IN} if not being used.		
GND	Ground Pin.		
V _{IN}	Power Supply Input.		
V _{OUT}	The pin is the power output of the device.		

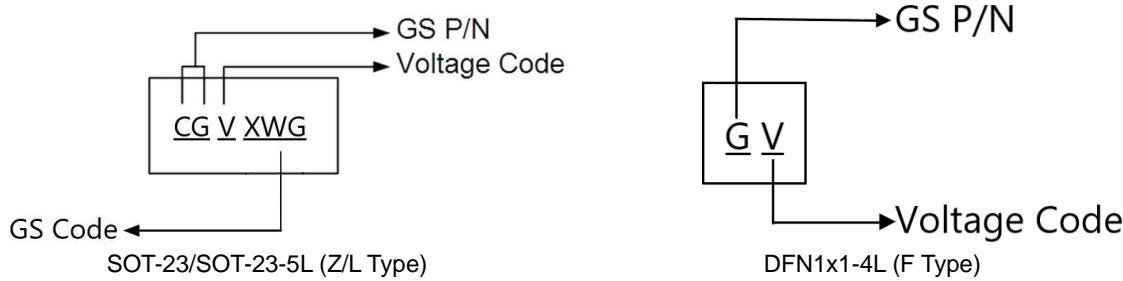

Ordering Information
